

## Salesforce Developer GTM Systems

[Apply Now](#)

Company: Deel

Location: Manama

Category: computer-and-mathematical

### Who We Are And What WeDo

Deel is a global team that helps businesses hire anyone, anywhere, easily. Deel consists of more than three thousand self-driven individuals spanning over 100 countries. Our unified yet diverse culture keeps us continually learning and innovating the Deel platform and our products for customers.

Companies should be able to hire the best talent anywhere in the world, so we are building the best platform to make that a reality. Our market-leading technology, expertise, and global team are crucial to the success of Deel's platform. We deliver the best products and platform features in our space, enabling millions of jobs worldwide and connecting the global workforce with the best companies and opportunities.

### Why should you be part of Deel's success story?

A 30-mile hiring radius should no longer dictate how companies hire because great talent lives everywhere. Deel sees a world without hiring borders and endless talent that pairs perfect candidates with great companies.

We offer global teams all the tools they need to hire, onboard, manage, pay, and scale at full speed. We aim to foster a diverse global economy by building a generational platform that

seamlessly connects companies with talent worldwide.

After our successful Series D in 2021, we raised another \$50M last year, doubling our valuation to \$12B.

There's never been a more exciting time to join Deel — the market leader in international payroll and compliance.

## **Duties**

Perform configuration and customization of the Salesforce.com and other revenue platforms

Meet with stakeholders to determine business, functional, and technical requirements and support application design, configuration, testing and deployment

Create/modify existing controllers, controller extensions, and triggers across all platforms.

Develop highly interactive and customer-centric UI using Visualforce, JavaScript and JQuery technologies.

Integrate multiple systems with Salesforce, including internal proprietary and third party applications

Create and execute unit, integration and user acceptance test plans, including use cases and test data

Follow and understand Salesforce product and technical capabilities resulting from installation upgrades, product releases, and acquisitions

Work closely with enablement to ensure on-time and quality delivery of releases
