

Training & Application Engineer Middle East & Africa

[Apply Now](#)

Company: OMICRON

Location: Manama

Category: architecture-and-engineering

OMICRON electronics designs, realizes, and distributes innovative solutions to make the power supply safer and more reliable. A decisive factor for many years has been the consistent focus on employee satisfaction, which has earned OMICRON multiple awards in local and international Great Place to Work rankings. Values such as trust, openness, and appreciation have guided us in our daily work for over 40 years.

For our Middle East Africa Sales and Academy team we are currently looking for a

Training & Application Engineer Middle East & Africa

What's it all about?

you develop and deliver training for OMICRON's products, both in person and with webinars

you provide product consultation, training and support within all areas of the power network to our customer base

you provide input on new products, product strategies, development, and application needs

you are directly involved with power system assets, in the generation, transmission & distribution areas

you manage and develop application notes and technical papers, including presentations at relevant seminars/conferences

you act as trouble shooter for technical problems for customer and sales support

What are we looking for?

you have completed your graduate education in electronics or electrical engineering

you have several years of experience in power systems, especially in the fields of power system protection and high voltage apparatus, as well as knowledge of power system substations, generation, transmission and distribution of electric power

you have in-depth experience in giving training to customers

you are customer oriented and like to support them in solving technical problems

communication and organizational skills are among your strengths

you have excellent language skills in English and Arabic, any other additional language is welcome

you are flexible, and would enjoy traveling to other countries

What makes us a great place to work?

A unique organizational culture based on trust, personal freedom and individual responsibility

A work environment with a strong focus on sustainability, diversity and flexible time management

State-of-the-art infrastructure and professional teams who enjoy their work

A creative and international environment in which innovative ideas are valued

An in-house kitchen team and many other benefits for your work/life balance

The position sounds exciting? Show us your motivation and apply via www.omicron.jobs .
